

## HELP A NOLAN

Please offer whatever you can to help our friend, Nolan Pereless. Nolan was diagnosed with an AVM (arteriovenous malformation) in his jaw. This is a tangle of abnormal blood vessels connecting arteries and veins to his mandible. Friday morning he was brought into surgery to cauterize the blood vessels and control the bleeding. Over the past days Nolan has undergone several embolizations, procedures, and multiple blood transfusions. AVMs are so rare and difficult to treat. Nolan will most likely in the near future have to undergo reconstructive mandibular surgery in order to remove the AVM. It is now our responsibility to help aid in the process of bringing him home. It will surely be appreciated and we are all wishing for a speedy recovery and good health. Please keep him and his family in your thoughts and prayers. Thank you Thank you to everyone who has already donated, it is dearly appreciated. We reached our previous goal of \$10,000 in the first 24 hours of this campaign, but aren't stopping yet let's try to reach \$25,000!
